

GARBAGE SORTING

AT THE HOUSE

ALTERNATELY EMPTYING EVERY 14 DAYS

LET US MAKE A DIFFERENCE FOR THE ENVIRONMENT

The waste is sorted into different waste groups here on Fanø. Please sort the waste correctly.

AT THE HOUSE

There are 2 waste bins at the house, one for residual waste and one for organic waste. Put everything in a plastic waste bag before the waste enters the bin. Close the bag with a tight knot.

THERE ARE NO SPECIAL BAGS FOR BIO-WASTE

If you have not brought waste bags from home, they can be bought in the supermarkets.

AT THE ENVIRONMENTAL STATIONS

Here you can get rid of waste such as cardboard, paper (newspapers), hard plastic, metal (cans), glass (bottles), cartons (e.g. milk and juice) and batteries.

WHAT IS RESIDUAL WASTE?

Residual waste is packaging with not rinsable dirt but also waste that does not belong to the other waste groups. Ashes (cold) from the stove belongs among residual waste. **REMEMBER:** Put the ashes (cold) in a plastic bag (tied with double knot).

Examples of residual waste: empty pizza trays, toothpaste tubes, butter trays etc. however NOT milk and juice cartons, as these must be sorted in the container "KARTONER" at the environmental stations.

WHAT IS BIO-WASTE?

Biowaste is all food waste without packaging. Put everything in a plastic waste bag before the waste enters the bio-waste bin (with the brown lid). Close the bag with a tight knot.

THERE ARE NO SPECIAL BAGS FOR BIO-WASTE
